

Restaurant Website Development Roadmap

Freelancer Project Roadmap from Scratch

Phase 1: Requirement Gathering

Understand the restaurant's goals, target audience, cuisine type, online ordering requirements, reservation system needs, social media links, business hours, locations, and branding assets.

Phase 2: Competitor Research

Analyze 5-10 competing restaurant websites. Study menu presentation, booking flow, SEO strategy, customer reviews, and visual design.

Phase 3: Website Structure

Home, About Us, Menu, Gallery, Online Ordering, Reservations, Reviews, Contact Us, Blog (optional).

Phase 4: Wireframing

Create page layouts before design. Plan navigation, hero section, featured dishes, testimonials, location map, and contact form.

Phase 5: Content Collection

Collect logo, menu details, food photos, chef/team photos, customer testimonials, social media links, and business information.

Phase 6: UI/UX Design

Select color palette, typography, image style, buttons, and mobile-first responsive design.

Phase 7: Development

Build using Next.js/React or WordPress. Implement responsive layouts, contact forms, booking functionality, and WhatsApp integration.

Phase 8: SEO Optimization

Optimize titles, meta descriptions, schema markup, local SEO, Google Business Profile integration, sitemap, robots.txt, and image optimization.

Phase 9: Testing

Test responsiveness, speed, booking forms, menu functionality, SEO score, and browser compatibility.

Phase 10: Deployment

Deploy on Vercel, Netlify, or hosting provider. Configure domain, SSL certificate, analytics, and Search Console.

Phase 11: Maintenance

Monthly updates, menu changes, SEO monitoring, backups, performance checks, and security updates.
